EDUCATION

Coimbatore Institute Of Technology

Bachelor of Engineering in Computer Science, Minor in Business

Coimbatore, Tamil Nadu, India

July. 2016 – Sept.2020

TECHNICAL SKILLS

Languages: Java, Golang, SQL

Frameworks: Spring Boot, Hibernate, Gin

Technologies: Kafka, Docker, RESTful APIs, Microservices

Databases: MongoDB, MySQL, PostgreSQL

Developer Tools: Git, IntelliJ IDEA, VS Code, Prometheus, Grafana

EXPERIENCE

Software Development Engineer

Jio Platforms Limited

May 2022 – Present

Bengaluru, Karnataka, India

- Tagging Service
 - * Engineered a tagging service using **Java, Springboot, and MongoDB**.
 - * Enabled users to create, manage, and search reports based on tags.
 - * Optimized performance with MongoDB indexing for efficient tag assignment and retrieval.
 - * Designed and exposed RESTful APIs for seamless integration and interaction.
- Notification Service
 - * Devised a generic notification service that supports email, SMS, and push notifications using **Gin, PostgreSQL, and MongoDB**.
 - * Incorporated scheduling capabilities with **Java Spring Boot** for running cron jobs.
 - * Implemented a scalable API for diverse notification types.
 - * Ensured reliable performance through efficient data handling and scheduling mechanisms.
- Facility Search with Distance Calculations
 - * Implemented a service to fetch and list facilities with distance calculations using the Haversine formula.
 - * Crafted with Java, Springboot, and MongoDB for flexible data storage and faster retrieval.
 - * Used PostgreSQL for structured data management.
 - * Achieved **latency of around 200-550ms**.
- Optimized Search Functionality
 - * Optimized the search functionality of facilities using **Azure AI Search**.
 - * Reduced **latency from 3s to around 1000-1200 ms**.
- Buyer-Vendor Collaboration Platform
 - * Developed a feature for buyers to upload requests and vendors to upload designs using Java, Springboot.
 - * Enabled collaboration through a discussion-based chat system.
 - * Stored messages in MongoDB for scalability and ease of management, while managing other data in MySQL.
 - * Allowed buyers and vendors to approve styles and costings, streamlining communication and decision-making.
 - * Increased buyer-vendor engagement by **25%** within the first three months of launch.
- Automated Distribution Plan Creation
 - * Devised an API using Java, Springboot, and MongoDB to automate distribution plan creation.
 - * Integrated with Centric PLM to retrieve style and design data.
 - * Used Procuero to generate purchase requests and communicate with vendors.
 - * Streamlined the distribution planning process by enabling real-time approval tracking and purchase request generation.
 - * Reduced vendor waiting time and increased article delivery by 40%.
